from the shipped client
track codes
app.asar (PolyTrack 0.6.2)
official tracks
generator (route by construction)
physics .wasm
collision geometry (captured)
wasmtime host in Python (no browser, no IPC)
PolyTrackEnv 62-float observation, 9 actions
acceptance gate 10 human laps, 5 tracks
IQN policy + guided beam search
the client's own verifier (shipped worker, Node)
both checks execute the same physics module
